Summary

Full-stack developer specialized in app and web technologies, with proven experience in building AI-integrated, fintech, and e-commerce platforms. Proficient in Python, Flutter, React.js, Node.js, and modern databases. Possessing a strong foundation in UI/UX design (Figma), technical documentation, and API integration. Passionate about empowering developer communities through clear communication and scalable tools, and continuously learning web frameworks, server tooling, and workflow optimization.

Education

Vellore Institute of Technology, B.Tech in Computer Science

- GPA: 8.97/10
- **Relevant Coursework:** Computer Architecture, Data Structures & Algorithms, Machine Learning, DBMS, SQL Fundamentals

Experience

Software Engineer Intern, IIT Madras – Chennai, India

- Developed a comprehensive water data visualization platform integrating multiple environmental parameters including temperature, precipitation, and population data.
- Converted large datasets into vector tiles and stored them on AWS for efficient data retrieval and scalability.
- Implemented interactive data visualization using MapLibre for seamless map-based data exploration.
- Created an internal review management application with PostgreSQL database integration for streamlined data administration.

Software Engineer Intern, Learnoverse – Remote

- Implemented OAuth and JWT authentication systems for React Native mobile application ensuring secure user access.
- Integrated OTA (Over-The-Air) updates using AppsonAir for seamless application deployment and maintenance.
- Developed dynamic blog pages using Next.js with responsive design and content management capabilities.
- Built educational content scraping system using Telegram API and FastAPI endpoints with YouTube API integration.
- Designed AI-powered question generation system using Generative AI to create questions from video transcripts, stored in MongoDB.

App Developer Intern, Paynav – Bangalore, India

- Managed a production-level fintech application, ensuring reliability and scalability.
- Integrated robust payment gateways and security protocols.
- Collaborated with cross-functional teams to refine application performance.

App Developer Intern, Cehpoint – West Bengal, India

- Designed and developed a social media app using modern front-end and back-end technologies.
- Developed an e-commerce app with integrated payment and AI-based recommendation modules.
- Emphasized responsive design and seamless user experience.

Projects

Finalist – Code for Good Hackathon, JPMorgan Chase & Co. – Bangalore

- Built a role-based educational platform for a nonprofit organization within 24 hours.

- Developed a scalable React.js web app with Node.js backend and PostgreSQL, ensuring real-time performance.
- Selected as one of the top teams across India to present the solution to JPMC executives.

Prepy AI Study App – International Hackathon Winner

- Won the international app development hackathon for building Prepy, an AI-powered study tool deployed on the Play Store.
- Developed and maintained API documentation and developer guides to support future developers.
- Designed and tested FastAPI endpoints to power LLM-based features, simplifying integration.
- Managed deployment lifecycle using Firebase and Docker; supported onboarding and community queries via Discord.

Dreamfarm

- Developed an AI farming app for an Intel AI hackathon to predict crop production and detect diseases.
- Utilized Flutter, Django, Node.js, machine learning algorithms, and the Gemini AI platform.

Technologies & Skills

Programming Languages: Python, Dart, C, C++, JavaScript, HTML, CSS, Java

Frameworks & Technologies: Flutter, FastAPI, Node.js, React.js, React Native, Next.js, Django, MERN stack, Tailwind CSS, Gemini AI, MapLibre

Databases & Cloud: MongoDB, PostgreSQL, AWS, Firebase

Tools & Skills: GitHub, Docker, REST APIs, OAuth, JWT, Webhooks, Vector Tiles, OTA Updates, Technical Documentation, Community Engagement, API Integration, Developer Support, SaaS Environments, Workflow Optimization
